

Corporate Profile

GeoNexus Technologies is a Management and Information Technology consulting firm. We specialize in helping organizations operate more efficiently and solve complex business problems using Geographic Information System (GIS) and Enterprise Asset Management (EAM) technologies. We offer a unique blend of services and software solutions designed to solve today's business problems by leveraging state-of-the-art asset management, visualization and business intelligence information and technology. We assist our clients with strategy, planning, implementing, and integrating GIS technology to provide the visual perspective of data in order to achieve optimal results. We have experience integrating GIS with mission-critical business systems such as EAM, Customer Information Systems (CIS), Hydraulic Modeling, Outage Management, and Enterprise Resource Planning (ERP). We deliver advanced solutions based on best-of-breed Commercial-Off-The-Shelf (COTS) software that targets specific business needs and fills functional gaps.

Geoworks™

GeoNexus Technologies provides a suite of pre-packaged solutions called Geoworks™. Geoworks combines visualization and geoprocessing capabilities from GIS with work and asset management capabilities from EAM software. We understand that your business requirements often extend beyond the capabilities provided in COTS software and we pride ourselves on delivering advanced solutions based on best-of-breed software from leading vendors such as ESRI,® IBM,® SAP,® Oracle,® and Infor® that target specific needs and fill functional gaps. Given our partnerships with the core software vendors and our focus and specialty in integration we can efficiently respond to technology innovation and provide solutions that support the latest platforms.

Professional Services

In addition to Geoworks Assess, GeoNexus Technologies is a full service GIS/IT consulting firm providing the following services:

Program Management

Technical Leadership

Data Conversion and Quality Management

Strategic and Implementation Planning

Business Process Optimization

Business Use Case Development

System Integration Specifications and Architecture

Enterprise Database Design and Development

Application Development and Implementation

Geoworks Assess™

Integrating GIS and EAM technology is much more complex than installing and configuring out-of-the-box software and must include an overall asset management and geospatial database maintenance strategy. Organizations often think they can simply purchase a vendors' product that promises GIS and EAM integration and later learn that the solution fails due to incomplete capabilities, inadequate asset or GIS database structure, or lack of defined business processes. GIS and EAM implementations are often managed by different departments and integration requires coordination and cooperation across the enterprise which presents additional challenges. Our consultants have over 20 years experience implementing GIS and over 10 years experience integrating GIS and EAM technology for organizations across North America. We have developed a standard service template called Geoworks Assess™ for evaluating an organizations readiness for integration. Geoworks Assess is a set of tasks that are performed to evaluate an organizations' technology and processes and provide recommendations including the steps necessary for a successful GIS and EAM integration. We use a number of fundamental indicators for determining if an organization is ready for integration, which is independent of the actual GIS and EAM software used. Contact GeoNexus Technologies for more details and to schedule an assessment.

Solutions for Successful GIS and EAM Integration
