

# Solutions for Successful IBM® Maximo® Spatial Implementation

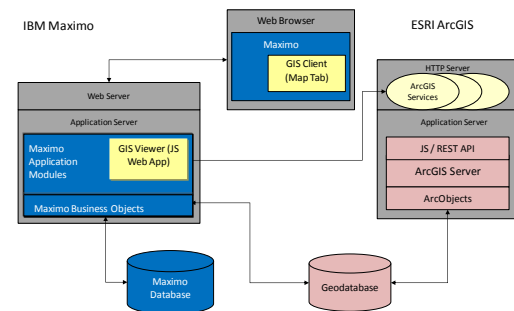

- Readiness Assessment**

GeoNexus Technologies™ Consultants have over 10 years experience implementing Maximo Spatial for a variety of organizations across North America. We have developed a standard service template for evaluating an organizations readiness for implementing Spatial. A set of tasks are performed to evaluate an organization’s technology and processes and provide recommendations including the steps necessary for a successful implementation.

- Installation and Configuration**

Implementing Maximo Spatial requires in depth knowledge of both Maximo and Esri® ArcGIS® software. GeoNexus Technologies can bridge the gap by augmenting your project team, whether internal staff or external consultants, with skills and experience specific to implementing Maximo Spatial. We have over 20 years of experience implementing ArcGIS and over 10 years of experience integrating ArcGIS with Maximo.

- Value Added Extensions**

In our experience, an organization’s business needs often extend beyond the capabilities provided in off-the-shelf software such as Maximo Spatial. GeoNexus Technologies has experience enhancing Spatial by leveraging Maximo’s Integration Framework (MIF) and the Esri Javascript Application Programming Interface (API). We have built numerous “widgets” that plug-in and extend Spatial with functionality to support specific business processes and workflows.

**Visual Perspective. Optimal Results.**
