

ENSURING INTEGRITY OF ENTERPRISE DATA

Through End-to-End Knowledge & Proven Software

OUR FOCUS

Our core focus is enabling access to accurate, reliable, and timely spatial and enterprise data to support better decision-making at asset intensive organizations. We do this through end-to-end knowledge and proven software products.

Our solutions are tailored for asset intensive industries including gas and electric, water and wastewater, pipeline, telecommunications, and transportation.

SAP

OUR SOLUTIONS

GGEOWORX® SYNC

Synchronizes data between Esri ArcGIS and your enterprise systems.

GGEOWORX® ANALYZE

Identifies and reports on data integrity issues between your shared GIS and EAM data.

GGEOWORX® OFFICE

Delivers enterprise functionality to your Esri ArcGIS Online map.

GGEOWORX® SKETCH

A comprehensive redlining system used to enhance communication and collaboration throughout your enterprise.

OUR PARTNERS

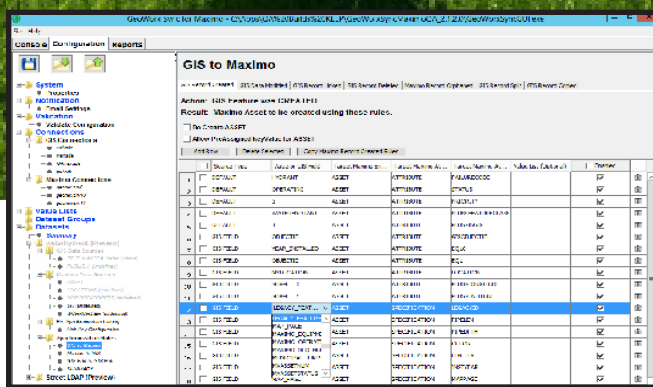

We partner with industry technology leaders including ABB®, Ericsson®, Esri®, IBM®, Oracle®, and SAP® to provide easy-to-use integration software and solutions. For information on how to partner with GeoNexus Technologies, contact us at: partners@geo-nexus.com.

OUR SERVICES

Our expertise in both GIS and other Tier 1 enterprise systems allows us to offer more than just products. We also deliver professional GIS and enterprise system consulting, including Maximo Spatial implementation services.

GGEOWORX[®] SYNC

ABOUT GEOWORX SYNC

GeoWorx Sync is a powerful tool for synchronizing data that is shared by multiple enterprise systems.

SAVE TIME & MONEY

GeoWorx Sync can be installed quickly and eliminates the need for dual data entry, saving you time and money.

DATA INTEGRITY

GeoWorx Sync runs a full comparison of your asset data to ensure it's reliable for decision-making across your enterprise.

COMPLEX EDITING

GeoWorx Sync can be configured to handle a number of complex GIS editing scenarios, including linear splits and orphans.

ARCGIS ONLINE

GeoWorx Sync allows you to load asset data or synchronize records between your enterprise system and ArcGIS Online.

SYNC DATA BETWEEN YOUR GIS AND ENTERPRISE SYSTEMS

Organizations use a variety of enterprise systems to manage data. In many cases data related to customers, assets, work, and resources is replicated across these enterprise systems and quickly becomes unreliable due to an undefined system of record. GeoWorx Sync solves this issue by synchronizing common data stored and managed by independent enterprise systems.

CLIENTS SAY:

"The GeoWorx Sync tool has been surprisingly fun to set up and our Work and Asset Management team has picked it up quickly!"

- Jeremy Williams, IT Manager at City of Clearwater, FL
